

MUSTAFA AHMAD

FULL-STACK WEB DEVELOPER

Egypt | mustafa.ahmad.work@gmail.com | +201092434027

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Full-Stack Web Developer focused on building practical web applications and business systems with Laravel, PHP, React, and JavaScript. Experienced in developing backend systems, admin dashboards, APIs, databases, and client-based projects. Currently focused on improving software architecture, testing, clean code, and maintainable application design.

EXPERIENCE

Full-Stack Web Developer at freelancer

2024 - Present

Developing web applications and business systems for personal and client projects using Laravel, PHP, React, and JavaScript. Working across backend development, databases, APIs, administration dashboards, authentication, business logic, and frontend development.

SKILLS

Backend: PHP, Laravel, REST APIs, Authentication, Authorization

Frontend: JavaScript, React, HTML, CSS, Tailwind CSS

Database: MySQL

Tools: Git, GitHub, Filament, Livewire, Laragon

Practices: Clean Code, SOLID, Testing, Database Design

PROJECTS

Attendora — Attendance Management System

Laravel · Filament · Livewire · MySQL · Python

Developed a modular attendance management system for employees, branches, devices, and attendance operations. Built dedicated Administration and Employee panels with role-based access and workflows. Implemented employee attendance, leaves, salaries, expenses, and daily/monthly attendance reporting. Developed a Python-based AI attendance kiosk with face recognition and camera integration for employee check-in/out. Added offline kiosk capabilities with local SQLite storage and encrypted configuration. Built and tested the system across backend services, attendance workflows, kiosk integration, and edge cases.

Fursan — Business Management System

Laravel · Filament · Livewire · MySQL

Developed a modular business management system for organizing company data and operational workflows. Built an administration panel for managing core business operations through structured modules. Implemented employee/business data management, permissions, and administrative workflows. Developed reactive interfaces and interactive management features using Filament and Livewire. Structured the application into maintainable modules with a focus on clean architecture and extensibility.
